Abstract card

rschenk, B. Perceptual, evaluative and behavioral changes through externally mediated self-confrontation. Didakometry (Malmö, Sweden: School of Education), No. 41, 1974.

This report describes the development and application of the idea of microteaching in research and education. It examines the use of different feedback devices for self-control and self-direction. The main conclusions reached are (1) that externally mediated self-confrontation via CCTV/VR is a most important factor in connection with training and therapeutic treatment and (2) that microsetting models still are without teoretical foundations.

Indexed:
Self-confrontation
Microsetting
Audio video lab.
Cybernetic model
Experiments
